***KALV Scalp Setup Brief** KALV is gapping up 38% on momentum as a top premarket gainer with strong 6.39x relative volume, indicating institutional interest in this biotech name. Key risk is the large float at 38M shares which could create resistance on any profit-taking, making this more suitable for quick scalps than extended holds. Look for entries on pullbacks to VWAP or the gap fill around \$19.25 for long setups, or wait for a clear break above \$27 with volume confirmation. Watch the 9:45-10:00 AM window closely - if volume starts to dry up without follow-through buying, be ready to exit quickly as biotech momentum can reverse fast.*
