****SAGT Scalp Setup Brief**** SAGT is exploding on 11.52x relative volume with an 80% gap up, likely driven by pre-market momentum as a top gainer, though the catalyst appears weak without fundamental news. ****Key risk:**** Extremely low float (0M reported) creates violent price swings that can gap against you instantly. ****Ideal entry:**** Wait for a pullback to \$2.20-2.30 support zone or break above \$2.55 with volume confirmation for continuation. ****Watch:**** Volume sustainability above 10x RVOL - if volume dies, this will collapse fast given the momentum-driven nature and lack of solid catalyst.

****FCEL Scalp Setup Brief**** FCEL is surging 11.7% on massive 9.75x volume following Bloom Energy's blowout AI-driven earnings beat, creating sympathy momentum across the fuel cell sector. Key risk is the large 53M float which could lead to quick profit-taking once momentum fades. Look for entries on pullbacks to \$10.80-\$10.90 support with tight stops, targeting quick scalps to \$11.30-\$11.50 resistance. Watch for volume expansion above \$11.20 - if it breaks with conviction, this could extend toward \$12+ intraday.

***TRAW Scalp Setup Brief** TRAW is running on healthcare sector momentum with 12.9x relative volume after gapping up 15.7% on pre-market coverage mentions. Key risk is the low \$1.28 price point making it susceptible to volatile swings and potential wash-out moves below \$1.20 support. Look for long entries on pullbacks to the \$1.25-\$1.27 range with tight stops, targeting quick scalps to \$1.35-\$1.40 resistance. Watch for volume confirmation on any bounce - if volume dies on pullbacks, this could fade quickly given the small 8M float.*

***PRCH Scalp Setup - GO** PRCH is running +20.7% on strong Q1 earnings with raised guidance, backed by massive 6.48x relative volume indicating serious institutional interest. The 82M float creates moderate resistance to quick moves, so expect choppier action than typical low-float runners. Look for entries on pullbacks to VWAP or key support levels rather than chasing the current momentum. Watch for volume confirmation on any breakout attempts - if volume starts dying, this could fade quickly given the larger float.*

***KALV Scalp Setup Brief** KALV is ripping +38.8% on 6.39x relative volume, likely driven by pre-market attention as a top gainer with strong momentum continuation potential. The 38M float provides decent liquidity but watch for potential volatility spikes during heavy volume periods. Look for entries on pullbacks to support levels or breakouts above key resistance with volume confirmation - avoid chasing the initial gap-up. Key risk is the lack of a specific fundamental catalyst beyond being a momentum play, so watch for any sudden volume drops that could signal profit-taking and rapid reversals.*
