Float		4/8			
Price Range		3/5			

****USEG Scalp Setup - Strong A+ Grade**** USEG is exploding +56% on massive 8.55x relative volume as a top pre-market mover, likely benefiting from renewable energy sector momentum or company-specific catalyst speculation. ****Key risk****: The 36M float provides decent liquidity, but this parabolic move could reverse violently on any profit-taking or lack of follow-through news. ****Entry context****: Look for pullback entries on volume spikes near psychological levels (\$1.50 resistance) or wait for flag formations above \$1.40 support with tight stops. ****Watch****: Volume sustainability - if RVOL drops below 3x during regular hours, momentum is likely fading fast.

Catalyst (1.4h ago · ChartMill · Low Impact)

As the US market prepares to open on Monday, let's get an early glimpse into the pre-market session and identify the stocks leading the pack in terms of gains and losses.

Float		6/8			
Price Range		4/5			

****RMAX Scalp Setup - LONG BIAS**** RMAX is ripping +26% on acquisition news by tech-focused real estate brokerage with massive 5.15x relative volume confirming institutional interest. Key risk is the +19.8% gap creating significant air underneath current levels if momentum fails. Look for entries on pullbacks to VWAP (\$9.80s) or on volume-confirmed breakouts above \$10.20 resistance. Watch the \$10.00 psychological level closely - a decisive break below could trigger rapid gap-fill selling.

Float	7/8	
Price Range	5/5	

****GLND Scalp Setup Brief**** GLND is running +28% on news of a Halliburton drilling agreement for 2026, with explosive 29x relative volume indicating strong retail momentum in this small 9M float energy play. The key risk is the typical biotech-like volatility of small energy explorers - moves can reverse quickly on profit-taking. Look for entries on pullbacks to the \$6.40-6.50 support zone with tight stops, targeting quick 5-10% scalps on any volume spikes. Watch the \$7.00 psychological level as the critical resistance - a break above with volume could trigger another leg up to \$7.50+.

Price Action	10/10	
Float	8/8	
Price Range	4/5	

****HTCO Scalp Setup - GO Signal**** HTCO is surging +64% on massive 19x relative volume as it appears on pre-market top movers lists, creating significant momentum with its tight 2M share float amplifying moves. The key risk is the already extended +13.8% gap that could lead to aggressive profit-taking once regular session volume hits. Look for long entries on any pullback to \$17.50-\$18.00 support with tight stops, or fade strength if it pushes above \$19 without volume confirmation. Watch the first 15 minutes of regular trading - if it holds above \$18 with sustained volume, this has multi-dollar potential given the float size.
